Subject: Information desired as to drugs usable in controlling motion sickness

1. Is it possible to give sodium amytal by hypo spray? If so what would be the largest practicable dose by this means?

2. What would be the time element as to effect of this type of intra muscular injection?

3. Can the hypo spray be used through clothing without the danger of causing infection?

4. How near the patient must the instrument be brought for drug administration?

5. Would

7½ gr. of Caffeine
& sodium benzoate by
~~hypodermically~~ hypodermically be
the best stimulant
to overcome the
effects of this
motion sickness
remedy or would
bicarbonate of
soda mixed be
preferable?
